

# right for higher ed

The nation's college and university campuses are where great minds are molded, where creative thought is celebrated, and where knowledge is consumed. But students from the Y Generation see themselves as more than just consumers of knowledge. They're in the market for progressive, innovative brands that can deliver the best college experience around. Prospective students want campuses complete with dynamic learning environments, collaborative interaction hubs, and streamlined services. Meanwhile, college and university planners are grappling with other pressing issues: how to keep pace with student growth; how to satisfy donor demands; and how to maintain competitive advantage - all within the context of dwindling budgets.

## Project Frog can help you satisfy students and staff demand while meeting your own needs.

**Do we have to sacrifice design for speed and cost?** Our award-winning product design can be customized to fit campus design guidelines, purchasing and bidding requirements. The interiors can be as simple or as complex as you need them to be; we provide the free-span warm shell, making interior customization an architect's dream. Plus, our planning, design and construction takes only about 6 months, so implementation can easily occur over the summer break.

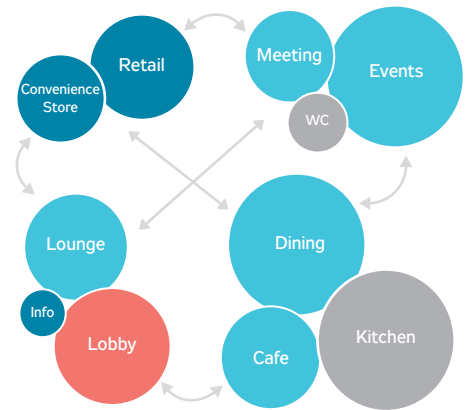

**Can a better environment boost learning scores?** Yes! Frog buildings can yield higher student performance and staff productivity than traditional school buildings. In fact, high performance learning environments can translate into 26% faster learning rates, up to 18% improved test scores, and improved wellness and morale.

**Can Frog buildings help us go green?** Our building was awarded Building Green's Top 10 Green Building Products of 2009. Maybe that's because Frog buildings perform 40 - 50% better than traditional academic buildings - more than 60% better when you integrate additional renewable energy features. Our buildings are designed to be LEED Silver out of the box and with a few enhancements can achieve LEED Platinum status and can be energy neutral. We track the performance of our buildings using a live energy performance dashboard. High performing buildings mean real money savings against ever-increasing energy expenditures.

**How flexible are they now and in the future?** Our buildings, which are designed to last a lifetime, can be easily repurposed without sacrificing usability, quality, or performance. They are designed to support multiple learning styles, program types and technologies. This adaptability makes them a great compliment to larger, long-term facility solutions.

# fit for young adults

Prospective students want campuses complete with dynamic learning environments, collaborative interaction hubs, and streamlined services.

site plan  
student union ex3.2.1

Student learning rates can increase by over 20% when you provide abundant natural daylighting.

**Working with you.** It couldn't be easier! Whether you are an architect, a facility manager or a curious customer, our team can provide the right tools that will help you determine if we're a good match for your project. Contact us or fill out a simple online questionnaire and our planning team will work with you to tailor your space and site plans, specify product and performance goals, and refine pricing and schedule.
